Assets button: will show you all assets you have.

Guidelines: will show you following text:

Important Guidelines and Rules for Using the Bot:
1. Security and Privacy
• Your security is our priority! The bot uses your Binance account's API with limited permissions: read and trade access only. Withdrawals (fund transfers) should be disabled in your API settings to protect your funds.
• Disabling withdrawals in the API settings ensures that no funds can be moved out of your account by the bot. If you need a more detailed description pleas press /Description
2. Responsibility for Your Trades
• Please remember that you are fully responsible for any profits or losses from your trades. The bot will execute based on the settings and instructions you provide, but market movements can be unpredictable.
• We recommend investing only money you can afford to lose, as cryptocurrency markets can be volatile.
3. Usage Rules and Bot Limitations
• The bot does not create new wallets or handle fund withdrawals. All transactions occur directly within your Binance account as trades only.
• Set realistic alerts and avoid spamming multiple commands, as this may slow the bot's response.
4. Support and Best Practices
• For any questions or issues, please reach out to support. We are here to help you get the best out of your trading experience.
• Stay informed on market trends, and use the bot as a tool to support—not replace—your personal trading strategy.

Happy trading, and thank you for using the Crypto Trade Bot!

Tokens for "Get crypto Prices":

1	BTC	ETH	USDT	SOL
2	BNB	XRP	DOGE	USDC
3	ADA	TRX	SHIB	AVAX
4	LTC	PEPE	XLM	LINK
	Custom Token			

Set Price alerts:
Enter the Token (e.g. BTC/USDT)

Track Price:
Enter the token you want to track (e.g. BTC/USDT, ETH/USDT)

Command list for the menu:

Utils:

/start--> Lists out the available buttons and a welcome msg
/api -- > Used to add/modify/remove api
Only allows adding api if has valid permission and access
/Description--> Disable Withdrawals

Here's how to disable withdrawals in the Binance API:
 1. Log in to Your Binance Account.
 2. Go to your User Profile and select API Management.
 3. Create a new API (e.g., "TradingBot") or edit an existing API.
 4. Set API Permissions:
 • After the API is created, you'll see permission options. Make sure that only "Enable Reading" and "Enable Spot & Margin Trading" are selected.
 • Disable the "Enable Withdrawals" option if it is selected.
 5. Save the settings and double-check that the permissions are set correctly.

Why This Setting Is Important:

Disabling "Enable Withdrawals" ensures that the bot cannot make any withdrawals or transfers from your account. This protects your capital and restricts the bot to executing trades and reading market data only.

Alerts:
/set_alerts--> Used to set alerts
/my_alerts--> Lists total set alerts
/remove_alerts--> Used to remove alerts

spot trading:
/open_spot--> Used to open a trade in spot
/Spotorders--> Used to list all crypto holdings in spot account.
It is also used to sell holdings with buttons
